

EXPERTS AT LEGACY DATA TAPE

DATA RECOVERY

BREAK FREE FROM THE PAST.

With Dternity Data Recovery services you can let the experts from the world's largest data tape manufacturer recover your data from old data tape. Whether you need to recover data for business, litigation and compliance purposes we have the expertise to find and migrate what you need from all types of tape storage media. No project is too small or too big. We perform all our services at a Fujifilm manufacturing facility inside clean room environments.

Every recovery project is different and we will consult with you first to identify the requirements and procedures necessary to extract your data. Dternity Data Recovery can consolidate legacy backup catalogs from various systems and mediums into a single inventory.

We can recreate the backup environment, or you can supply your legacy equipment to us. With a complete catalog you can then make informed decisions around the data you need to retrieve and migrate.

RECOVER. MIGRATE.

By moving your content off old tape with Dternity your data can then be archived for the future. No longer burdened by old systems and software applications, your data can be copied onto the most current tape media, future proofed by non-proprietary and open LTFS or TAR standards. Data migration takes place within our secure ISO27001 facility, your data is analyzed and verified to ensure the highest quality of data integrity. Metadata will be created to provide ease of use once migration has completed.

PROTECT. ARCHIVE.

After migration, your data lives in the Dternity Media Cloud, deep storage built to preserve and protect your digital files. Dternity provides this service by storing and managing two copies on distinct LTO tape cartridges hosted in near-line

tape libraries. The Media Cloud is the easiest way to protect your content, all copies are managed through active monitoring and self-healing to ensure data integrity. Access files through the Dternity web portal to get the files you need anytime anywhere.

A NAME YOU CAN TRUST.

Dternity is Fujifilm's digital archive storage platform. Fujifilm has been a leader in data protection and storage for over 40 years. Pioneering many storage formats that have lasted decades and longer. We know what it takes to preserve and manage rich content and we continue to provide superior products and support that organizations and industries depend on worldwide.
